

DNR: STYR 2021/1690

Status of beamlines  
at MAX IV

August 2021

### ***Status of MAX IV***

The MAX IV accelerators are fully operational, 14 beamlines are able to take X-ray light, and 12 are able to serve users.

All 12 beamlines able to accept general users were reopened in spring 2021 in a restricted access mode (remote access and/or mail-in operations only, with no users or visitors allowed on-site), following a gradual restart of activities after the warm shutdown. The Bloch ARPES beamline is now capable of fully remote experiments. This was made possible by a new software control interface developed by the beamline staff that enables remote users to perform beamline tasks easily and safely.

According to the MAX IV reopening plan, users will be permitted back on-site in small groups (maximum two per experiment) starting September 13th. Unrestricted user access is planned for November 1st onward provided pandemic conditions continue to improve.

Activities towards project and scope completion of the different beamlines resumed after risk assessments were performed, to minimize staff congestion on site. At DanMAX expert commissioning experiments were performed so that the beamline will be ready to accept general users for powder diffraction experiments in autumn 2021.

The summer shutdown activities were completed according to plan, including the site acceptance tests for the ForMAX and MicroMAX insertion devices.

Appendix 1 lists the status of individual beamlines with techniques currently available to users on beamlines in operation, and estimated dates to deliver planned capabilities for beamlines in commissioning or under construction.

### ***Science impact and outlook***

The scientific output of MAX IV continues to grow, with 80 papers registered in 2021 so far. Of note are high impact papers published in *Science* on results from NanoMAX, *Advanced Energy Materials* from Balder, *Light* jointly from Balder and NanoMAX, *Acta Crystallographica D* and *IUCrJ* from BioMAX, *Nano Letters* from MAXPEEM, and more. The growth in publications, especially from BioMAX and HIPPIE (respectively 26 and 10 papers to date), shows that these beamlines are maturing.

Appendix 2 lists 2021 publications to date. Registered MAX IV and MAX-lab publications are available at <https://www.maxiv.lu.se/science/publications/>.

## Current status of individual beamlines

### Balder

#### Techniques available to general users

X-ray absorption spectroscopy (XANES and EXAFS) in transmission, continuous scanning down to 30 s/EXAFS

X-ray absorption spectroscopy (XANES and EXAFS) in fluorescence with 7 element SDD, continuous scanning down to 300 s/EXAFS

#### Techniques available to commissioning experts

X-ray emission spectroscopy (XES), expert mode with limited angular range

#### Techniques planned for general users

XRD: Q3 2022

XES spectrometer: Q3 2022

## BioMAX

### **Techniques available to general users**

Data collection at fixed energy between 6 and 19.5 keV, detector distance between 126 and 900 mm, beam focus of 20x5 microns or 50x50 µm and defining aperture of 5, 10, 20 or 50 µm
Automated sample mounting and dismounting from UniPucks, 29 puck positions in dewar
Sample temperature 100 K; room temperature with or without humidity control available for manual mounting only
SAD and MAD experiments
Automated data integration, scaling and merging. Offline remote access for manual data processing
SX experiments using HVE-injector (high viscosity extrusion injector), fixed target scan using the MD3
Element identification by X-ray fluorescence
Remote data collection
Fragment-based drug screening

## Bloch

### **Techniques available to general users**

High-resolution angle resolved photoelectron spectroscopy (ARPES), using deflection based analyzer or 6-axis manipulator
Linear vertical or horizontal polarised light from EPU, with energy range 10-1000 eV (peak flux and resolution 15-200 eV)
Online scanning tunneling microscopy, 50K - 300K

### **Techniques planned for general users**

Spin-ARPES: Q3 2022
---------------------

## CoSAXS

### **Techniques available to general users**

Solution/soft matter conventional SAXS and bio SAXS
Sample environment: Baseline configuration, heating stages, user implementation

### **Techniques available to commissioning experts**

Time resolved experiments
WAXS
XPCS
Advanced sample environments: rheometer, heating stages, microfluidics, stopped flow, magnets

### **DanMAX**

The powder X-ray diffraction (PXRD) station is being commissioned.

#### **Techniques available to commissioning experts**

X-ray powder diffraction

Time resolved studies

Low temperature studies

In situ battery set up

2D PXRD mapping

Total scattering

#### **First general users**

Q4 2021

### **FemtoMAX**

#### **Techniques available to general users**

Scattering set-up (SAXS, WAXS) in-vacuo sample environment

Crystallography and grazing incidence X-ray diffraction

Excitation 400 nm – THz radiation

Time-resolved X-ray induced fluorescence measurements

Time resolution is 500 fs for scanning measurements (work ongoing to improve), <200 fs for single-shot

### **FinEstBeAMS**

#### **Techniques available to general users**

High-resolution photoelectron and Auger electron spectroscopy of gaseous samples (GPES)

Ion time-of-flight mass spectrometry of gaseous samples (GPES)

X-ray absorption of gaseous samples, measured in the total ionYield mode (GPES)

Photoluminescence spectroscopy of solid samples in the wavelength range 1.4um-200 nm (PLES)

Measurement of photoluminescence excitation functions at fixed emission wavelengths as well as reflection spectra from polished surfaces of solid samples (PLES)

Temperature dependencies of luminescence properties of solid materials in the temperature range from 10 K up to 350 K (PLES)

Photoelectron-photon coincidence (PEPICO) spectroscopy of gaseous samples (GPES)

X-ray photoelectron spectroscopy of surfaces and interfaces in UHV (SSES)

Angle-resolved photoelectron spectroscopy of 2D materials and condensed matter physics (SSES)

### Techniques planned for general users

Solid state end-station: Q3 2021

### *FlexPES*

#### Techniques available to general users

Beamline: Linear horizontally polarized light from LPU, with energy range 40-1500 eV, spot on sample both defocused (0.5-1.5 mm) and focused (from 50x15 µm to 150x40 µm in different end stations)

Surface- and material science (SMS) branch: High-resolution photoelectron spectroscopy (PES) on solid samples using SES-2002 analyzer and 4-axis manipulator; X-ray absorption spectroscopy (XAS or NEXAFS) using total and partial electron yield

Low density matter (LDM) branch: High-resolution PES on LDM samples using R4000 analyzer with these sample delivery systems (samples must be approved by chemical safety group):

- Liquid jet setup for e.g. aqueous solutions
- Molecular jet source (continuous beam) for cold beams of atomic and molecular gases
- Gas cell for PES on atomic and molecular gases

### *ForMAX*

ForMAX is under construction.

- Start of commissioning: Q1 2022
- First expert users: Q1 2022
- First general users: Q4 2022

### *HIPPIE*

#### Techniques available to general users

Catalysis cell: APXPS of solid-gas interfaces up to 10 mbar, for catalysis and surface science

PM-IRRAS: APXPS and FTIR on the same spot up to 1 mbar for catalysis and surface science

Liquid/electrochemistry cell: APXPS of solid-liquid (dip-and-pull setup) and gas-liquid (liquid jet setup) interfaces up to 30 mbar for electrochemistry, energy, environmental, and atmospheric science

The HIPPIE B branch is under development.

- Start of commissioning: Q1 2023
- First expert users: Q4 2023
- First general users: Q1 2024

## **MAXPEEM**

### **Techniques available to general users**

Soft X-ray SPELEEM (micro-LEED, PED, micro-ARPES, XMCD microscopy)

## **MicroMAX**

MicroMAX is under construction.

- Start of commissioning: Q2 2022
- First expert users: Q4 2022
- First general users: Q2 2023

## **NanoMAX**

### **Techniques available to general users (KB end station)**

Scanning X-ray diffraction and coherent imaging in Bragg geometry

Forward ptychography and CDI

X-Ray fluorescence mapping in 2D

Forward ptycho-tomography (under development, not all samples are suitable, contact beamline team to discuss feasibility before proposal submission)

The FZP end station is under construction.

- Start of commissioning: Q3 2021
- First expert users: Q3 2021
- First general users: Q4 2022

## **SoftiMAX**

SoftiMAX is being commissioned. First general users were delayed to Q1 2022 due to extensive realignment and commissioning required after repair of the optics cooling leak.

### **Techniques available to commissioning experts**

STXM

Forward ptychography (basic)

XMCD microscopy (basic)

XRF mapping

### **First general users**

Q1 2022

## SPECIES

### Techniques available to general users

Standard cell: APXPS up to 20 mbar for catalysis, oxidation studies, and surface science

ALD cell: APXPS for in-situ ALD experiments up to 20 mbar

RIXS using the GRACE spectrometer (emission energy range 50-650 eV, only linear polarization horizontally and vertically). Solid samples only. LN2-sample cooling available, 4-axis manipulator

## VERITAS

### Techniques available to general users (open port B branch)

User roll-up at the open port branch. Only approved equipment (contact beamline)

### Techniques planned for general users

A branch: Q4 2021

## Appendix 2 2021 publications
